### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The present invention requires a mixture of silicas having particle size of 4, 8 and 13 nanometers. Independent claims of the present invention further disclose specific amounts in which the three silicas are used. Namely silica having average particle size of 4 nm is utilized in amount of 20-70 wt %, silica having average particle size of 8 nm is utilized in amount of 10-40 wt% and silica having average particle size of 13 nm is utilized in amount of 10-40 wt %. More specific independent claims requires 4 nm silica in amount of 44 wt%, 8 nm silica in amount of 28 wt % and 13 nm silica in amount of 28 wt %. Further independent claims also require presence of water soluble polymers, latex polymers and mixtures thereof.

The prior art of GUERRA as applied against present claims discloses latex composition comprising acrylic binder and silica. The silica utilized in the composition of GUERRA has particle size of 4-5 nm or 7-9 nm or 11-14 nm. These silicas are utilized separately. Although cited case law of *In re Linder* in general renders use of the mixtures of these silicas obvious, the amounts in which silicas are utilized, especially the amounts in claims 2 and 7 are not obvious. In view of the above discussion, pending claims are passed to issue.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
